

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million.

There are a number of factors which have contributed to this increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are surviving infancy. In the 1950s, only about 50% of children survived to the age of 5. Today, over 90% of children survive to the age of 5.

Another factor is the increase in the number of people who are surviving to the age of 15. In the 1950s, only about 20% of people survived to the age of 15. Today, over 80% of people survive to the age of 15.

There are a number of factors which have contributed to this increase in the number of people in the world who are aged 65 and over. One of the main factors is the increase in life expectancy. In the 1950s, the average life expectancy was about 45 years. Today, the average life expectancy is about 75 years.
